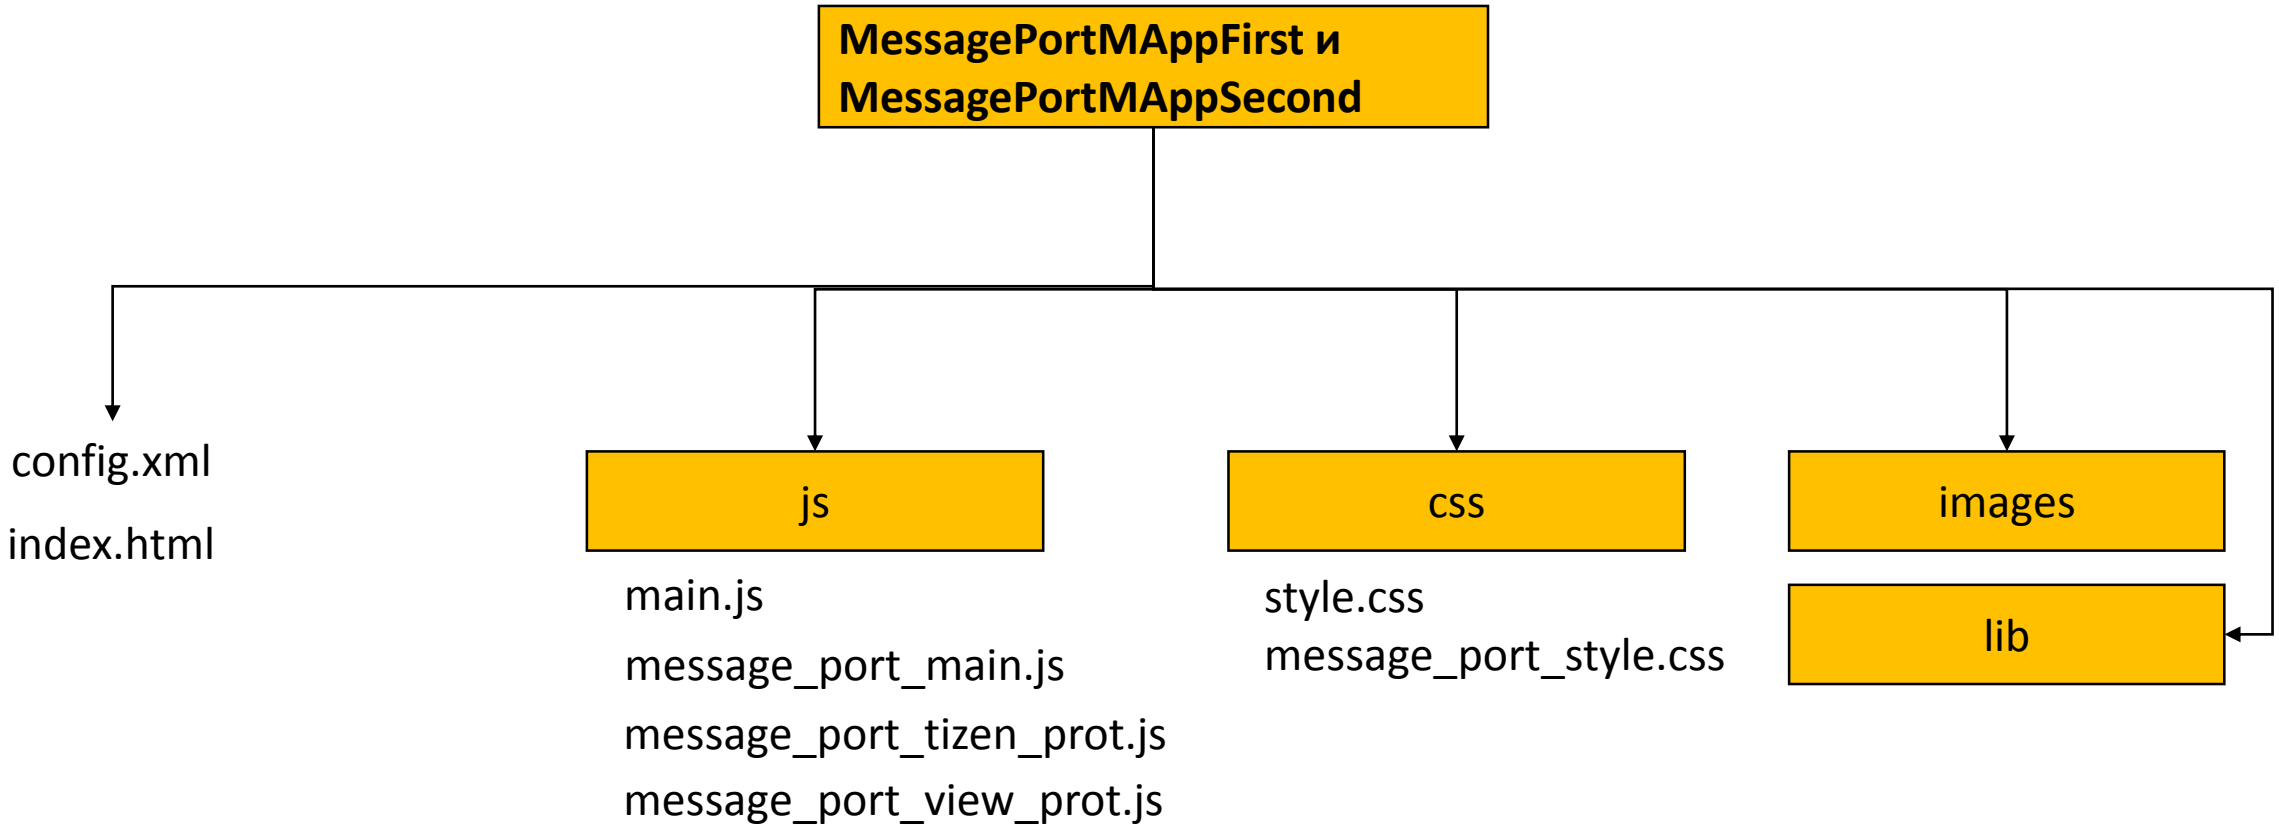
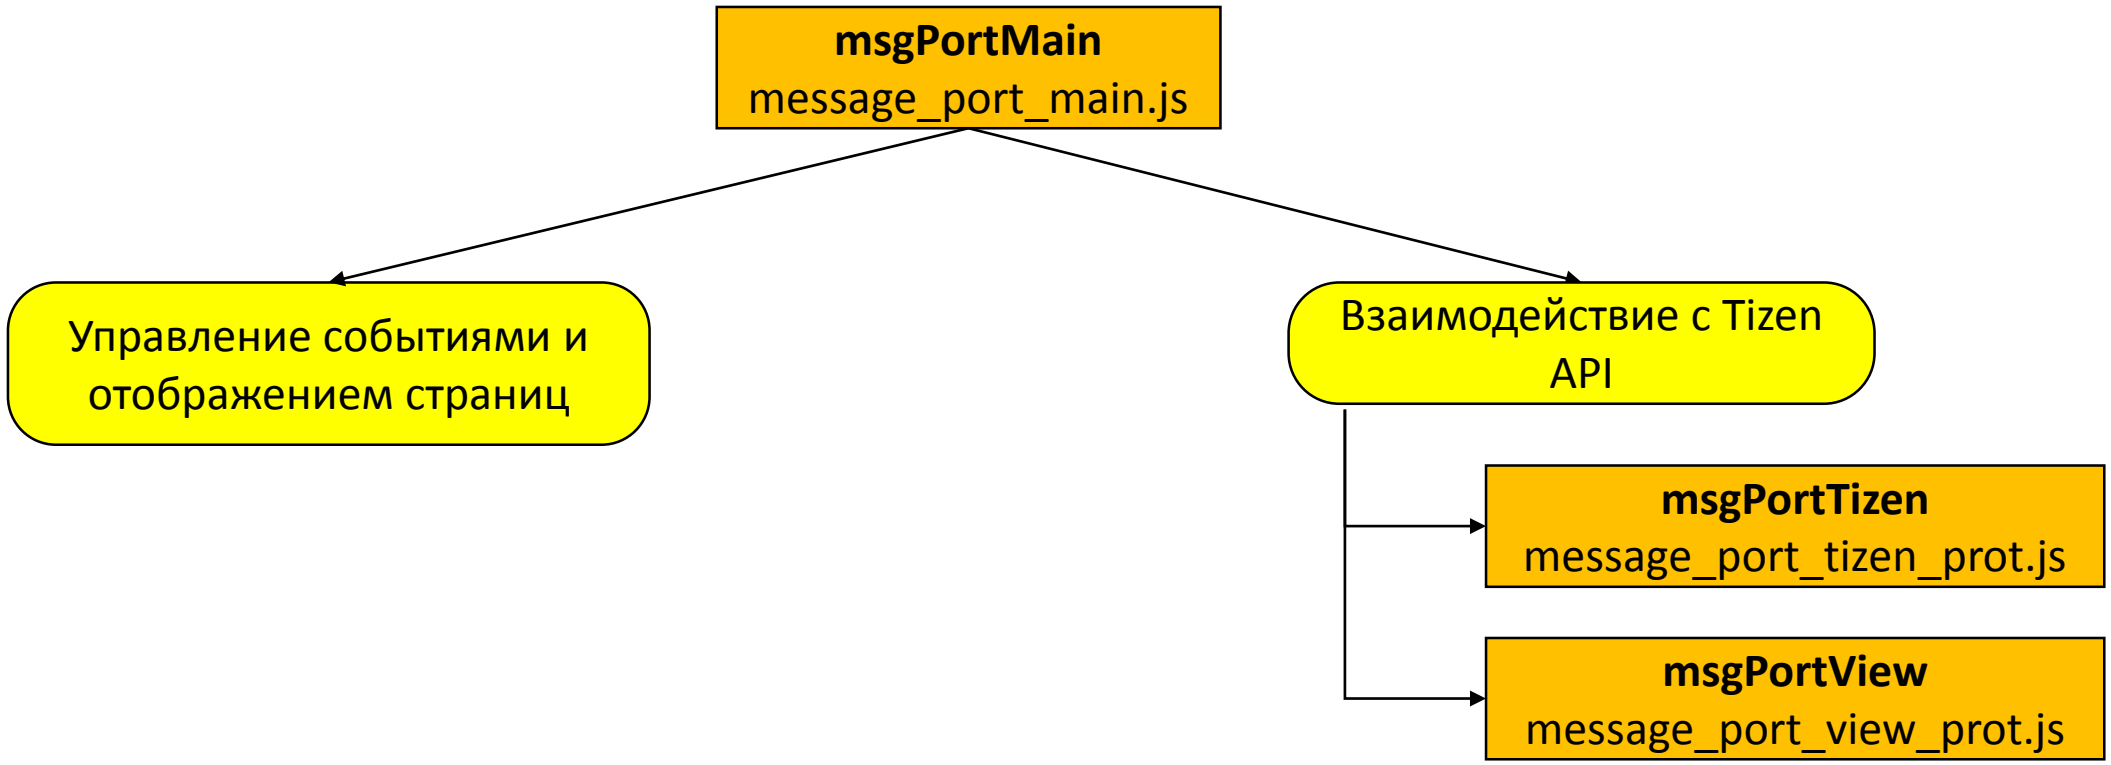
Инициализация удаленного порта

Структура приложения



Логическая структура javascript-файлов



Инициализация удаленного порта

message_port_main.js | message_port_tizen_prot.js | message_port_view_prot.js

```
initMessageRemotePort()
```

```
"PortApp2", "ZSdvscNQTf.MessagePortMApp"
```

→

```
initRemotePort(
    remoteMessagePortName,
    remoteAppicationId)

this.remotePort =  tizen.messageport.requestRemoteMessagePort(
                        this.remoteAppId,
                        this.remotePortName);
```

Отправка сообщений

message_port_main.js | message_port_tizen_prot.js | message_port_view_prot.js

sendMessage()

nameFrom, message →

```
sendMessage(from, message)

var messageData = [{ key: "from", value: from },
                   { key: "message", value: message},
                   { key: "date", value: new Date() }];

this.remotePort.sendMessage(messageData, this.localPort);
```

Получение сообщений

message_port_main.js | message_port_tizen_prot.js | message_port_view_prot.js

```
msgPortMain.init()

"PortApp1", msgPortView.addMessage  ──►  init(localMessagePortName,
                                             callbackView)

this.localPort = tizen.messageport.requestLocalMessagePort(
                                             this.localPortName);

var localPortWatchId = this.localPort.addMessagePortListener(
                                             onsuccessRecieveEvent);

function onsuccessRecieveEvent(data, replyPort)
{
        callbackView(data);  ──►  addMessage(msgObjList)
}

                                  $("#message-list").append(htmlMsg);
```
